Address: Nayanagar, Khilkhet, Dhaka - 1229

Professional Summary

Backend-focused Full-Stack Engineer with nearly **5 years** of experience designing and developing scalable web applications. Specialized in backend systems, database optimization, API architecture, and performance engineering using PHP and Laravel. Passionate about system design, maintainable architecture, and building reliable, high-performance products. Experienced in leading projects, solving complex technical challenges, and collaborating with cross-functional teams to deliver impactful business solutions.

Technical Knowledge

- **Software Architecture & Patterns:** MVC, HMVC, Repository Pattern, Service Container, Hexagonal, Clean Architecture, Monolithic & Microservice Architecture, Multi-Tenant SaaS Design
- **Backend & APIs:** Laravel, CodeIgniter, PHP, Familiar with Node.js, REST API, GraphQL API, Authentication (JWT, Passport, Sanctum)
- **Frontend:** JavaScript, jQuery, AJAX, HTML5, CSS3, Bootstrap, Tailwind CSS, React.js, TypeScript
- **Data & Messaging:** PostgreSQL, MySQL (Normalization, Functions & Procedures), Redis (Caching), Kafka (Personal Projects)
- **DevOps & Tools:** AWS Basics (EC2, S3, IAM, VPC), Basic Dockerization, Git & GitHub, Nginx/Apache, Valet, Postman
- **Other Expertise:** Task Scheduling, Queues & Jobs, Payment Gateway Integration

Employment History (5 years)

Huixin Global Ltd – Dhaka, Bangladesh | Onsite | Contractual

Senior Software Engineer | Full Time (Feb 2026 – July 2026)

- **Key Achievement:** Implemented **APK hardening** and **obfuscation** techniques to enhance mobile application security, preventing code manipulation, reverse engineering, and unauthorized access. Also developed a fully dynamic CPA marketing monitoring and analytics system for real-time data analysis, performance tracking, and interactive reporting dashboards.

BDTASK – Dhaka, Bangladesh | Onsite | Fulltime

Software Engineer | Full Time (Sept 2023 – Feb 2026)

- **Key Achievement:** Architected and implemented a **Multi Tenant SaaS** platform utilizing a **single codebase** with **hybrid database switching** logic (Session-based for Web / Token-based for Mobile), Implemented Attendance, Accounting, Catering Module

STITBD – Dhaka, Bangladesh | Onsite | Fulltime

Web Application Developer | Full Time (Jan 2022 - Sept 2023)

- **Key Achievement:** Successfully integrated a hybrid **Offline & Online POS System** across **16 restaurant branches**, ensuring real-time data synchronization. Besides this worked on multiple HRMS, Supershop, Pharmacy POS, Food Ordering & Ecommerce Platforms

Soft IT Security – Dhaka, Bangladesh | Onsite | Internship

Intern Web Developer | Full Time (Oct 2021 - Dec 2021)

- Assisted in developing web features and gained hands-on experience in the **PHP/Laravel** ecosystem.

Featured Projects

Multi-Tenant Restaurant ERP SaaS (Restora POS) | Associated with: BDTASK

Architected and developed a **multi-tenant SaaS** ERP platform using a **single shared codebase** with **hybrid tenant resolution logic** (session-based for web and token-based for mobile applications). Developed and integrated multiple ERP modules including Attendance, Accounting, Catering, and Restaurant Management. Contributed to production deployment and scaling of the platform serving restaurant businesses across multiple regions.

Technologies: Laravel, CodeIgniter 3, PHP, MySQL, REST API, AWS EC2/S3, Linux Server, ZKLibrary

Live Link: <https://restorapos.com/>

SaaS Skull – Multi-Tenant Microservice-Ready ERP | Personal

Architected a **multi-tenant** ERP platform using **Hexagonal Architecture** and **DDD principles** with **modular monolith** design and **microservice-ready** boundaries.

Technologies: Laravel, PHP, MySQL, Redis, Kafka (RdKafka), JWT Auth, REST API

GitHub Link: <https://github.com/theMridulKar/saas-skull>

Industry Expertise

- **Multi-Tenant SaaS Architecture:** Strong experience implementing Isolated Database models for security, scalability.
- **Enterprise Resource Planning (ERP):** IAS/IFRS-aligned Accounting, HRM, and Workforce Attendance systems.
- **Hospitality, Food & Beverage Tech:** Full-stack Restaurant ERPs, Catering Management, and Online Food Ordering ecosystems.
- **Retail & Healthcare Systems:** Specialized POS and ERP solutions for Pharmacy, Electronics, and General Retail.
- **Supply Chain & Logistics:** Integrated Courier, Logistics tracking, and Inventory Management systems.
- **Digital Presence & E-Commerce:** High-performance E-Commerce platforms, Call Center integration, and Portfolio sites.

Engineering Case Studies

Open Source Monica CRM - Tagging Ecosystem | Case Study

Designed and implemented a scalable, decoupled tagging module for a large-scale CRM. Addressed complex many-to-many relationship challenges by implementing **Domain-Driven Design (DDD)** principles and **Repository Pattern**. Achieved significant performance improvements by implementing **Redis-based caching** strategies for high-frequency read operations and containerized the entire development lifecycle using **Docker (Laravel Sail)** for parity across environments. Focused on maintaining 90%+ code coverage through automated unit testing.

Technologies: Laravel, PHP, MariaDB, Redis, Docker(Laravel Sail)

GitHub Link: <https://github.com/theMridulKar/monica-crm-advanced-tag-system>

Other Professional Projects

Multi-Branch Restaurant Management System (Khanas Restaurant App) | Associated with: STITBD

Developed and integrated a **hybrid Offline & Online** POS system across 16 restaurant branches with real-time data synchronization. Coordinated deployment activities, conducted client training sessions, monitored live implementation, and provided post-launch operational support.

Technologies: Laravel, PHP, MySQL, REST API

Enterprise HRMS Platform Enhancement & Customization | Associated with: STITBD

Enhanced and customized enterprise HRMS modules including Leave Management, Attendance, Payroll, and Requisition workflows. Implemented **GPS-based attendance** tracking, payroll automation, REST API integrations, backend optimization, and **role-based access** control while maintaining stability in production environments.

Technologies: Laravel, PHP, MySQL, REST API
